Objectives

At the conclusion of this activity, learners should be able to:

1. Enhance the timely recognition of chemotherapy-related cardiotoxicity
2. Recognition of caveats and pitfalls of various measures of assessing valvular regurgitation severity
3. Discuss importance and role of various imaging modalities in the early detection of infiltrative cardiomyopathies
4. Instruct learners on the technique of stress echocardiography and interpretation of wall motion abnormalities
5. Describe the spectrum of obstructive adult congenital heart diseases and detail the diagnostic echocardiographic approach for the identification of these lesions
6. Recognize the critical periprocedural role of echocardiography in patients undergoing structural interventional procedures
